WHAT WE KNOW ABOUT HEALING

Striae distensae, commonly known as stretch marks, result from an intense inflammatory reaction within the dermis, causing the release of elastase enzymes that degrade elastic tissue. Once formed, there is no conclusive evidence that stretch marks can be completely removed, making prevention a must. However, appearance of newly formed scars from injuries or surgeries, however, can be significantly improved if addressed early.

THE SCIENTIFIC DIFFERENCE BEHIND CENTAR®

Clinical studies have shown that Centella Asiatica extract reduces inflammation, aids in tissue regeneration, facilitates cell migration and boosts collagen production.

CENTAR®'s star ingredient, UDCA, is an ultra-distillate of active triterpenes derived from Centella Asiatica. Unlike typical Centella Asiatica extracts, which vary in concentration, UDCA is highly purified, standardised and, due to our pioneering extraction process, dramatically more potent.

NEXT LEVEL ANTI-INFLAMMATORIES

CENTAR®'s second “fire fighter” is Copper Tri-peptide (GHK-Cu), a cutting-edge anti-inflammatory renowned for its impressive skin rejuvenation properties. It promotes the production of new collagen and elastin, increases cellular turnover, and stimulates the creation of new blood vessels – all essential for optimal wound healing and scar minimisation.

CENTAR® Gel also contains the extremolyte Ectoin, a naturally occurring compound that protects organisms in extreme environments to soothe, lock in hydration, increases skin elasticity and aid in barrier repair.

CHOOSE YOUR HEALING HERO

CENTAR® Lotion and Gel can be used together, if necessary, but each product is formulated for maximum efficacy to target a specific concern at the optimum stage for intervention.

CENTAR® LOTION

Formulated for the prevention or improvement of newer, red stretch marks as well as closed red scars, this light cream-gel emulsion is ideal to treat larger, stretchmark-prone areas. It contains UDCA, Copper Tri-peptide, Beta Glucan (a humectant clinically proven to be 20% more hydrating than hyaluronic acid) and proven anti-inflammatory skin emollients.

CENTAR® GEL

A super-concentrated formulation for newly forming stretchmarks or persistently red scars, this powerhouse gel is designed for more aggressive scar modulation and can be applied over micro-pore tape and other breathable wound covers. It contains UDCA, Copper Tri-peptide, soothing Dexpanthenol (known for its ability to stimulate skin regeneration and promote wound healing), hydrating Hyaluronic Acid and Ectoin.

Both CENTAR® Lotion and Gel are safe for use during pregnancy and breastfeeding.
